School device tracking software

FLOWSTACK DEVICES

Device records with history attached.

Help school teams find students and devices, manage assignments and loaners, follow repair status, and preserve each serial number's history.

WHAT IT HELPS TEAMS DO

Keep day-to-day device operations connected.

- **Find the record:** autocomplete student names, IDs, serial numbers, and device names.
- **Manage handoffs:** assign, return, issue loaners, and follow current status.
- **Add context:** keep device notes, repairs, warranty details, and activity together.
- **Preserve history:** removed devices leave active search without losing prior records.

BEST FIT

For focused school device programs.

- **Device teams:** replace disconnected lookup and assignment spreadsheets.
- **Students:** use read-focused lookup and add notes without edit or delete controls.
- **Pilots:** try role-aware synthetic records before opening a workspace.
- **Schools:** use Teacher Pro or request enrollment-based invoice support.

LOOKUP

Student and device autocomplete

Search by name, student ID, serial number, or device name without requiring exact full values.

OPERATIONS

Assignments, loaners, and repair status

Keep the current device handoff and repair workflow visible to the right roles.

HISTORY

Preserved activity context

Review assignments, returns, status changes, notes, and restored serial-number records.

PLANS AND CAPACITY

Three clear ways to evaluate or adopt the Devices workflow.

- **Demo:** try synthetic lookup, role views, status, assignment, notes, and history with no sign-in or payment.
- **Teacher Pro:** run one active workspace with unlimited tracked devices; see the live plans page for current pricing.
- **School / Department:** request enrollment-based invoice, migration, procurement, and multi-school support.
