School inventory workflow software

FLOWSTACK INVENTORY

Inventory tracking for school repair teams.

Track Chromebook parts, device models, repair reports, history, and stock levels in one focused operational workspace.

10

device models

200

inventory item rows

7 days

trial before monthly or annual billing

WHAT IT HELPS TEAMS DO

Keep parts and repair records together.

- **Track parts stock:** follow counts by model, shared part, and inventory row.
- **Connect repair reports:** tie device repair activity back to operational records.
- **Review history:** see stock changes and repair-related movement over time.
- **Spot parts needed:** notice low-stock and pending repair needs before work stalls.

BEST FIT

For teams moving beyond spreadsheet inventory.

- **Repair teams:** connect parts and repair reporting without relying on spreadsheets alone.
- **Stock planning:** see low-stock and parts-needed signals before repairs pile up.
- **Pilots:** try synthetic inventory and history data before opening a workspace.
- **Growing programs:** add rows, add models, or request invoice-assisted scale.

STOCK

Parts and model awareness

Track device models, shared parts, inventory rows, counts, and status changes.

REPORTS

Repair-connected records

Keep repair reporting, history, and operational context closer to the inventory itself.

PLANNING

Parts-needed signals

Use low-stock and parts-needed views to keep repair work from stalling.

PLANS AND CAPACITY

Start with a demo, then choose the path that fits the inventory workflow.

- **Teacher Pro:** \$18/month or \$144/year, with a 7-day trial before monthly or annual billing from Account.
- **Included capacity:** 1 workspace with up to 3 active users, 10 device models, and 200 inventory item rows.
- **Room to grow:** add +5 device models and +100 rows, add +100 rows, or use School / Department invoice support.
